while additions are indicated by underlined text)*

IN THE ABSTRACT:

ABSTRACT

A compound of formula [V] is prepared by oxidizing a compound of formula [III].
Citalopram can be industrially and economically produced and at a high yield by ~~reacting~~
converting a compound of ~~the following~~ formula [V], which is prepared from a compound of
formula [III], to a compound of formula [VI], and then alkylating the compound of formula
[VI] to form citalopram with 3-(dimethylamino)propyl chloride in the presence of at least one
of N,N,N',N'-tetramethylethylenediamine and 1,3-dimethyl-2-imidazolidinone and a
condensing agent. The compound of the following formula [III], which is a key compound
for the production of citalopram, can be easily produced by subjecting the compound of the
following formula [II] to reduction and cyclization.
